ABOUT

Software Developer-Analyst with experience in frontend development, user interface design, and software analysis. I combine technical implementation with user-centered design thinking to create well-considered, user-friendly, and accessible digital solutions. My experience includes designing user interfaces for public-sector portals and developing software products that support multiple user roles.

WORK EXPERIENCE

Software Developer-Analyst — 2024-

HEISI IT OÜ

- **Frontend Development:** Responsible for frontend development of sports club management software, building reusable user interfaces that work effectively across different devices.
- **UI Design:** Design user interfaces in Figma, taking user needs, product objectives, and existing design systems into account.
- **Requirements Analysis:** Identify and analyse client needs and contribute to developing functional solutions.
- **Accessibility:** Apply WCAG best practices in user interface design and development.
- **Public-Sector Solutions:** Contribute to UI design for government portals using the Veera and TEDI design systems.
- **Sales Support:** Provide technical and design input for sales activities and help assess client needs.

PROJECTS

Sports Club Management Software - Ongoing Project (Design & Frontend)

Contributed to product analysis and UI design and am responsible for frontend development. The product is a multi-role white-label solution that can be customised to meet the needs and branding requirements of different sports clubs.
